

SolPrint Control Centre

Accurate, Real-Time information is key to the efficient running of any business. As systems grow the level of data can become excessive meaning that important issues are missed or not noticed while resolutions/actions can still be implemented.

The SolPrint Control Centre provides a graphical real-time monitor of performance / progress with events and notifications tailored to each individual user's role and responsibilities.

Notifications are available for all key business drivers covering Sales, Estimating, Production, Purchasing, Stock, Despatch, Compliance, Quality Assurance, Warehousing, Invoicing and Accounts.

Configurable Events allow for any database change to trigger an event. Events can be simply notifications of a change or drive analysis / real-time reporting linked to the SolPrint Reporting tools.

Graphical drill downs provide instant information of business performance/progress.

The SolPrint Control Centre is available for all users including Internal, Customer, Sales, Production and Suppliers allowing each to have their own bespoke hub.

Why not contact us now for a no obligation demonstration where we can show you how SolPrint could be implemented within your operation.
