

SolPrint email Proof Approval

The SolPrint email Proof Approval module allows for clients to approve their Proofs without the need for a Customer Portal Login.

An email is sent to the client with a link to the Job Proofs which are held in the SolPrint Digital Asset Management System (DAMS).

The client clicks on the link and a branded Proof Approval screen appears with the assets displayed for review and approval.

Each asset can be reviewed then approved or rejected. If rejected the client is forced to enter feedback on the issue and they also have the option to upload new files as required.

Once all assets have been actioned the client is prompted to submit the Approval which updates the SolPrint DAMS and Job Approval Status based on the selections made.

If an asset is rejected a follow-on Proof stage is automatically created and studio notified of the required re-proof.

Using the above process removes the need for clients to login to SolPrint whilst eliminating problems with email file sizes and version control as all assets are accessed directly from SolPrint DAMS ensuring everyone is working from the same files.

Historical approval views allow easy access to previous Proof stages for later review.

Why not contact us now for a no obligation demonstration where we can show you how SolPrint could be implemented within your operation.
